Math 12 Midterm Exam #2 (Compact Version) March 31, 2010

• This is a closed-book examination. No books, notes, calculators, cell phones, communication devices of any sort, or other aids are permitted.

• You need *not* simplify algebraically complicated answers. However, numerical answers such as $\sin\left(\frac{\pi}{6}\right)$, $4^{\frac{3}{2}}$, $e^{\ln 4}$, $\ln(e^7)$, or $e^{3\ln 3}$ should be simplified.

• Please *show* all of your work and *justify* all of your answers. (You may use the backs of pages for additional work space.)

1. [40 Points] Compute each of the following integrals, or else show that it diverges.

(a) $\displaystyle\int_0^9 \frac{1}{\sqrt{9-x}}\,dx$ (b) $\displaystyle\int \frac{5}{(x-2)(x+3)}\,dx$ (c) $\displaystyle\int \frac{x^3-1}{x^2+1}\,dx$

(d) $\displaystyle\int_{-\infty}^{\infty} e^x\,dx$ (e) $\displaystyle\int_7^{\infty} \frac{1}{x^2-6x+25}\,dx$

2. [6 Points] Determine whether the following sequence **converges** or **diverges**. If it converges, compute its limit. Justify your answer. Do not just put down a number.

$$\left\{n^{\frac{1}{n}}\right\}_{n=1}^{\infty}$$

3. [8 Points] Find the **sum** of the following series (which does converge):

$$\sum_{n=1}^{\infty} \frac{(-1)^n 2^{n-1}}{3^{2n+1}}$$

4. [18 Points] Determine whether each of the following series **converges** or **diverges**. Name any convergence test(s) you use, and justify that it's legal to use them. Show all of your work.

(a) $\displaystyle\sum_{n=1}^{\infty} \frac{3n^7+6n^{\frac{3}{2}}+5}{8n^9-\sqrt{n}+441}$ (b) $\displaystyle\sum_{n=1}^{\infty} \frac{e^n}{n^2+1}$ (c) $\displaystyle\sum_{n=1}^{\infty} \left(-\frac{7}{8}\right)^n$

5. [28 Points] In each case determine whether the given series is **absolutely convergent**, **conditionally convergent**, or **diverges**. Justify your answers.

(a) $\displaystyle\sum_{n=1}^{\infty}(-1)^{n+1}\frac{1}{n+5}$

(b) $\displaystyle\sum_{n=1}^{\infty}\frac{(-2)^n n!}{n^n}$

(c) $\displaystyle\sum_{n=1}^{\infty}(-1)^n\frac{\arctan n}{4^n}$

(d) $\displaystyle\sum_{n=1}^{\infty}\frac{(-1)^n}{n^3}$

****

OPTIONAL BONUS

Do not attempt these unless you are completely done with the rest of the exam.

****

OPTIONAL BONUS #1 Compute the sum of the following series:

1. $\displaystyle\sum_{n=1}^{\infty}\ln\left(1+\frac{1}{n^2+2n}\right)$

OPTIONAL BONUS #2 Determine whether the following series converges or diverges.

2. $\displaystyle\sum_{n=1}^{\infty}\frac{(-1)^n n^{3n}}{n^3(n!)^2e^{n^2}}$

OPTIONAL BONUS #3 Compute the following integral:

3. $\displaystyle\int\frac{\arctan x}{x^6}\,dx$

OPTIONAL BONUS #4 Compute the following integral:

4. $\displaystyle\int\frac{16e^{3x}}{e^{4x}-16}\,dx$
