Homework #2

Goal: Review of Limits, Derivatives and Integrals for Exponentials and Logarithms. Plenty of help in Office Hours!

FIRST: Read through and understand the following Examples.

Think about the graph of $y = \ln x$. We know that $\boxed{\lim\limits_{x \to 0^+} \ln x = \lim\limits_{x \to 0^+} \ln x \overset{0^+}{=} -\infty}$. Learn this!

Ex: $\lim\limits_{x \to 5^+} \ln(x - 5) = \lim\limits_{x \to 5^+} \ln (x - 5)^{5^+ \to 0^+} = -\infty$

Ex: $\lim\limits_{x \to 8^-} \ln|x - 8| = \lim\limits_{x \to 8^-} \ln |x - 8|^{8^- \to 0^-,\, 0^+} = -\infty$

Ex: $\displaystyle\int \frac{(3 - \sqrt{x})(1 + 2\sqrt{x})}{x^2}\, dx = \int \frac{3 + 6\sqrt{x} - \sqrt{x} - 2x}{x^2}\, dx = \int \frac{3 + 5\sqrt{x} - 2x}{x^2}\, dx$

$\displaystyle = \int \frac{3}{x^2} + \frac{5\sqrt{x}}{x^2} - \frac{2x}{x^2}\, dx = \int \frac{3}{x^2} + \frac{5}{x^{\frac{3}{2}}} - \frac{2}{x}\, dx = \int \frac{3}{x^2} + \frac{5}{x^{\frac{3}{2}}} - \frac{2}{x}\, dx$

$\displaystyle \overset{\text{prep}}{=} \int 3x^{-2} + 5x^{-\frac{3}{2}} - \frac{2}{x}\, dx = -3x^{-1} + 5(-2)x^{-\frac{1}{2}} - 2\ln|x| + C = \boxed{-\frac{3}{x} - \frac{10}{\sqrt{x}} - 2\ln|x| + C}$

Ex: $\displaystyle\int_{\ln 3}^{\ln 8} \frac{e^x}{\sqrt{1 + e^x}}\, dx = \int_4^9 \frac{1}{\sqrt{u}}\, du = \int_4^9 u^{-\frac{1}{2}}\, du = 2\sqrt{u}\,\Big|_4^9 = 2\sqrt{9}^{\,3} - 2\sqrt{4}^{\,2} = 6 - 4 = \boxed{2}$

Here $\boxed{\begin{aligned} u &= 1 + e^x \\ du &= e^x\, dx \end{aligned}}$ and $\boxed{\begin{aligned} x = \ln 3 &\implies u = 1 + e^{\ln 3} = 1 + 3 = 4 \\ x = \ln 8 &\implies u = 1 + e^{\ln 8} = 1 + 8 = 9 \end{aligned}}$

Ex: $\displaystyle\int_1^2 \frac{1}{3 - 5x}\, dx = -\frac{1}{5}\int_{-2}^{-7} \frac{1}{u}\, du = -\frac{1}{5}\ln|u|\,\Big|_{-2}^{-7} = -\frac{1}{5}\left(\ln|-7| - \ln|-2|\right) = \boxed{-\frac{1}{5}\ln\left(\frac{7}{2}\right)}$

Here $\boxed{\begin{aligned} u &= 3 - 5x \\ du &= -5\, dx \\ -\tfrac{1}{5}du &= dx \end{aligned}}$ and $\boxed{\begin{aligned} x = 1 &\implies u = 3 - 5 = -2 \\ x = 2 &\implies u = 3 - 10 = -7 \end{aligned}}$

Next, Complete the following Homework problems.

Differentiate the following functions. Simplify.

1. $f(x) = e^5$ 2. $f(x) = e^x + x^e$ 3. $y = \dfrac{1 - e^{2x}}{1 + e^{2x}}$ 4. $f(x) = e^{\sin(2x)} + \sin\left(e^{2x}\right)$

5. $y = e^{\sqrt{x}}$ 6. $y = x^2 e^{-\frac{1}{x}}$ 7. $y = \ln\left(1 + e^{3x}\right)$ 8. $f(x) = \ln\left(\dfrac{1}{x}\right) + \dfrac{1}{\ln x}$

9. Express the quantity as a single logarithm. Simplify.

$$\frac{1}{3} \ln[(x + 2)^3] + \frac{1}{2}[\ln x - \ln[(x^2 + 3x + 2)^2]]$$

Solve each of the following equations for x:

10. $e^{7-4x} = 6$

11. $\ln(3x - 10) = 2$

Evaluate each of the following Limits:

12. $\lim\limits_{x \to 2^-} \ln|x - 2|$

13. $\lim\limits_{x \to 3^+} \ln(x^2 - 9)$

Evaluate each of the following Integrals. Simplify. Justify.

14. $\displaystyle\int e^x + x^e \, dx$ 15. $\displaystyle\int_0^{\ln 4} \frac{1}{e^{2x}} \, dx$ 16. $\displaystyle\int \frac{(1 + e^x)^2}{e^x} \, dx$

17. $\displaystyle\int \left(e^x + e^{-x}\right)^2 \, dx$ 18. $\displaystyle\int \frac{e^x}{1 + e^x} \, dx$ 19. $\displaystyle\int_2^3 \frac{1}{5 - 4x} \, dx$

20. $\displaystyle\int_e^{e^3} \frac{4}{x(\ln x)^2} \, dx$

REGULAR OFFICE HOURS

Monday: 12:00–3:00 pm

Tuesday: 1:00–4:00 pm

Wednesday: 1:00-3:00 pm

Friday: 12:00–2:00 pm

Math Fellow evening TA Help Hours TBD soon

• Office Hours are open to everyone. Please feel welcome whether you have lots of questions or just one question. Just stop by. :-) Working on your calculus assignment can be fun! You are encouraged to make fully engaged visits to office hours **each** week. I hope that you come hang out at many help sessions.

• **NO LATE HOMEWORK!** unless illness or emergency occurs.
